IMP1 SERIES

COLONIC METAL SELF-EXPANDING STENTS

DESIGNED AND PRODUCED BY
medwork®

The outstanding IMP nitinol metal stent range sets new standards in stent technology. The flexible, self-expanding colonic nitinol stents have exceptional radiological visualisation characteristics, aiding in the precise positioning of the stents. In addition, a proximal thread allows for stent repositioning or complete removal.

FEATURES

- Nitinol construction ensures that the maximum diameter and radial force are reached at body temperature
- The superb expansion capabilities provides excellent opening ability even through difficult or torturous strictures
- Atraumatic edges are rounded to minimise possible mucosal damage
- IMP stents have several platinum–iridium alloy markers in the middle and at both ends of the stent to aid accurate placement
- IMP stents have exceptional flexibility which allows the stent to adapt to different anatomical conditions
- A range of diameters and lengths are available to ensure an IMP stent is available for a range of clinical situations
- The slim 13fr diameter of the Insertion system aids accurate placement of the stent.
- IMP colonic stents are 0.035" guidewire compatible
- Two radiopaque external makers are supplied with each stent

STERILE

IMP1 COLONIC EXPANDABLE STENTS

Class IIa CE0459

Part number	Description	Pack size
IMP1-C2-30-075	Expands to 30mm diameter and 75mm in length	1
IMP1-C2-30-090	Expands to 30mm diameter and 90mm in length	1
IMP1-C2-30-120	Expands to 30mm diameter and 120mm in length	1
