VIPER

GRASPING FORCEPS FOR BILIARY STENT RETRIEVAL

The Viper Tooth design provides excellent gripping ability of biliary stents which need removing prior to replacing. The high quality handle together with their expertly designed jaws ensures stent capture is made simple and easy. The Viper stent retrieval forceps are sterile packed to reduce the possibility of cross-contamination.

FEATURES

- Individually sterile packed to remove the possibility of cross-contamination
- Extremely versatile – can be used for all types of stents, i.e pigtail and straight.
- Viper forceps with wide jaw opening are purpose designed for biliary stent removal
- Traceability : 3 detachable stickers accompany each cleaning brush
